Integrating South Asian Healing Traditions into Counselling, Psychology and Psychotherapy

Friday, 5th May and Saturday, 6th May 2017

OISE Library

Eurocentric psychology and psychotherapy research repeatedly cites the concurrent use of traditional and cultural healing methods such as religion and spirituality, mind-body therapies and Ayurvedic treatments. However, there has been little focus on the integration of these practices with counselling, psychology and psychotherapy. South Asians are the largest visible minority group in Canada and it is therefore important for service providers, clinicians, academics and decision makers to better understand how these culturally relevant practices relate to holistic health and wellbeing. It is through this understanding that mental health service providers will be better able to provide South Asian service users (and others) with an integrated and aligned approach to recovery. Presenters from India, USA and Canada will spend the day in dialogue about traditional practices as utilized in South Asia and the process of transference to the North American context. They will describe evidence and provide rich narratives that highlight the South Asian experience of traditional methods of healing.
