Plurilingual Pedagogies & Digital Technologies to Support Learning in STEM
ESCAPE Projects Symposium

This two-day symposium showcases applied research related to language friendly pedagogy and digital technologies in elementary and secondary classrooms and schools.

The ESCAPE Projects research team has collaborated with teachers, students, policymakers, teacher educators and international researchers to create opportunities for multilingual newcomer students to thrive in their STEM classes and in school more broadly while also connecting to their families.

Come to this conference to find out what they learned about the impact of language friendly pedagogy and the resources available to become a culturally responsive educator.
