Introduction

The Toronto Area Residency Consortium (TARC) is a CPA accredited doctoral residency training program in school, clinical, counselling, health and neuropsychology, hosted by Broadview Psychology and Forward Thinking Psychological Services®, comprised of two tracks for 2026-2027 residency year:

- Child Track (2 positions): School – Clinical Psychology
- Adult Track (4 positions): Two positions in Clinical-Counselling Psychology, 1 position in Clinical Psychology and 1 position Neuropsychology.

The training program takes place over a 12-month, 1600-hour residency.

We were re-accredited in 2022 for a 6-year period.

The overarching goal of the TARC is for residents to develop competencies in the core areas of psychological practice, including psychological assessment, diagnosis, treatment/intervention, consultation and program evaluation/research. These clinical skills will be developed and applied through the lenses of, and the various training opportunities unique to, the specific tracks and rotations of the consortium.

Consortium Partners

The nine-member organizations of the consortium are:

School-Clinical Track

- (i) Toronto District School Board (TDSB) (ON HIATUS)
 - (ii) Toronto Catholic District School Board (TCDSB)
 - (iii) Child Development Institute, LDMH Program (ON HIATUS)
 - (iv) Family Psychology Centre (FPC)
 - (v) Broadview Psychology
 - (vi) Forward Thinking Psychological Services
-

Adult Track:

- (i) Toronto Metropolitan University's Centre for Student Development and Counselling (CSDC)
- (ii) University Health Network
- (iii) York University Psychology Clinic
- (iv) Broadview Psychology
- (x) Forward Thinking Psychological Services

The consortium is hosted by Broadview Psychology and Forward Thinking Psychological Services®. Drs. Christine Sloss and Marlene Taube-Schiff are the co-directors for the residency program. The Consortium is composed of several partners: a Toronto school board, several hospitals and community and university-based mental health settings.

TARC is strongly committed to providing a learning and training environment and culture built on the fundamental values of equity, diversity and inclusion. We value the diversity of the communities we serve, the diversity of those offering psychological/psychotherapy services and supervision, and the importance of recognizing and respecting human differences and similarities.

Track Overviews

Child Track - School-Clinical

TARC will be offering 2 full-time residency positions in its School-Clinical Track. Each resident will spend 2.5 days a week in one of the school boards and 2 days a week at one of the clinical training sites until the end of June/beginning of July. Residents will then complete all of their remaining training days at their clinical training site in July and August. All residents will participate in a weekly seminar series on Fridays over the course of the year.

The central goal of the Clinical-School track is to graduate residents who have competency in both school and clinical psychology with an emphasis on children, youth, and families. This goal is pursued through the provision of training in core areas of psychological practice, including assessment, diagnosis, therapeutic intervention, psycho-educational and psychological testing and consultation within both school and clinical rotations.

The training residents receive will equip them with the skills required to intervene effectively with children and youth experiencing a wide range of mental health concerns in both school and community settings as well as skills needed to assess, diagnose and offer remediation for learning difficulties. The high-quality training residents will receive will also prepare them for post-doctoral supervised practice in psychology.

Position 1: The resident will have two part-time rotations simultaneously at Toronto Catholic District School Board (TCDSB) and at Family Psychology Centre (FPC).

Position 2: The resident will have two part-time rotations simultaneously at Toronto Catholic District School Board (TCDSB) and at either Broadview Psychology or Forward Thinking Psychological Services ®.

*Note, you are not required to be of the Catholic faith to work as part of the psychology staff at the TCDSB.

Adult Track

Four full-time positions will be offered within the Adult Track:

Clinical-Counselling (Two positions):

Position 1: The resident will have two part-time rotations simultaneously at Toronto Metropolitan Centre for Student Development and Counselling (CSDC) and at the York University Psychology Clinic (YUPC).

Position 2: The resident will have two part-time rotations simultaneously at Toronto Metropolitan Centre for Student Development and Counselling (CSDC) and at Broadview Psychology

Clinical (One position):

Position 3: The resident will have two part-time rotations simultaneously at the Eating Disorders Program at Toronto General Hospital, UHN and Forward Thinking Psychological Services ®

The goal of these rotations is to prepare residents for independent practice as professional psychologists who are scientifically informed. By combining these two rotations, residents will work with clients from diverse populations, covering a wide range of mental health problems.

Our Health Psychology rotation is currently on hiatus for the 2026-2027 match year.

Adult Neuropsychology (One position):

Position 4: One full-time position will be offered within the Adult Neuropsychology Track. The resident will have two major half-time rotations in the Epilepsy Surgical Program and Movement Disorders/Deep Brain Stimulation Program at Toronto Western Hospital, as well as two minor half-time rotations within the Neuro-Oncology and Pediatric Aftercare Programs at Princess Margaret Cancer Centre and within the Brain and Spinal Cord Rehabilitation Program at Toronto Rehab Institute. The rotations at Toronto Western and Princess Margaret will focus on neuropsychological assessment and diagnosis whereas the rotation at Toronto Rehab will focus on intervention and rehabilitation.

After the completion of the assessment rotations, residents will develop competency in neuropsychological assessment, diagnosis, and consultation working with adults and seniors with diverse neurological disorders. Residents will also gain experience providing feedback to patients, their care-partners, and interdisciplinary team members. After completion of the minor intervention rotation, residents will develop competency in provision of individual and group intervention to support rehabilitation and recovery for individuals with complex psychological issues in the context of adjustment to life altering injury concurrent with various medical, neurological, psychiatric or substance use disorders.

All residents will participate in a weekly seminar series on Fridays over the course of the year.

Training Goals

Within each organization there is a recognized need to train residents in competencies related to the practice of professional psychology unique to that setting.

The following general goals of training are common to all members of the consortium:

1. To provide residents with a broad-based training program in core areas of psychological practice – assessment, diagnosis, consultation and treatment/intervention.
2. To facilitate the development of residents in their professionalism and professional identity as psychologists.
3. To facilitate the development of skills necessary for functioning as psychologists working within inter-disciplinary teams and with community partners.
4. To facilitate residents' appreciation and understanding of individual differences, including gender and multicultural issues.
5. To facilitate residents' integration of research and best practices into their professional roles.

In order to ensure that this residency meets professionally agreed upon standards and ensures employment mobility for our graduates, we are accredited by CPA and our residency training program adheres to CPA standards and criteria. We are also members of the Canadian Council for Professional Programs in Psychology (CCPPP) and the Association of Psychology Post-Doctoral and Residency Centers (APPIC). We participate in the APPIC Computerized Matching Program, and adhere to APPIC guidelines.

Consortium Partner Descriptions (School-Clinical Track):

Toronto Catholic District School Board (TCDSB):

The Toronto Catholic District School Board (TCDSB) is the largest Catholic school board in Canada, with over 90,000 students and 200 schools. TCDSB students come from a diverse range of ethnic and socio-economic backgrounds. The work of Psychological Services staff addresses the continuum of needs from prevention to assessment and intervention, and from mental health promotion and training to program design and evaluation. In addition to School Psychology as their declared area of competence, a number of Psychological Services staff are also licensed to practice in Clinical and/or Counselling Psychology (as per their registration by the College of Psychologists of Ontario).

Broadview Psychology

Broadview Psychology is a family focused and team based private clinic in central Toronto and Stouffville that provides DBT, CBT and EFT treatment to children, adolescents, parents, families, adults, and couples with diverse challenges. Our team consists of psychologists, social workers, post-docs, graduate students, behaviour therapists, dietitians and admin staff. Our clinic specializes in assessing and treating multi-diagnostic clients who have difficulties in regulating their emotions and behaviour through comprehensive and adherent outpatient DBT. We offer comprehensive DBT programs for children, young adolescents, older adolescents, young adults and adults with considerable involvement of their family members. Our clinicians work closely together as a team to provide a wide range of services to clients and family

members, including individual, group, parent, and family therapy, as well as phone/text coaching, behavioural coaching, dietitian counselling, and meal monitoring. Although most of our services are offered in person, we do provide virtual treatment to clients when necessary and clinically appropriate.

We strive for clinical effectiveness through strong training and supervision programs, and ongoing and extensive program evaluation. We are family and community oriented, and benefit from formal and informal consultation with family members, colleagues, service providers and community agencies. Finally, we are committed to accessibility and inclusion, and offer pro bono or low fee services to lower income clients whenever possible.

<http://www.broadviewpsychology.com/>

Family Psychology Centre

Family Psychology Centre (FPC) is a teaching center as well as a full-service psychology practice for children, adolescents, young adults, and families. Clinical Psychology Residents have the opportunity to obtain intensive training in emotion focused therapies (EFT-F and EFT-Y), family-based treatment, as well as a wide range of other treatment approaches, including CBT, DBT, ACT, art therapy and play therapy. As a clinical teaching site within the community, our team comprises four supervising psychologists, two child psychiatrists, approximately ten psychology trainees at different levels of clinical practice— practicum, residency, and supervised practiced— as well as an interdisciplinary team, including Psychiatry, Social Work, Art Therapy, Psychotherapy, and Occupational Therapy. The clinical services that we offer include psychological consultation, assessment, individual therapy, separated and joint parent-child dyadic therapy, parent coaching sessions, couples therapy, and family-based therapy. We are affiliated with the Emotion Transformation Institute, a clinical research and teaching organization offering training for clinicians locally and internationally. Our Emotion Focused Therapy workshop for parents and caregivers provides tools, support, and skills practice for parents and caregivers looking to help their loved ones of all ages through emotional and behavioural problems, mental health challenges, and recovery from a range of clinical disorders.

Our main clinic site is conveniently located in Uptown Toronto near Yonge and Eglinton and we have an interdisciplinary site integrated with pediatrics and medical subspecialties near North York General Hospital at Leslie and Sheppard (North York site). Both sites treat diverse populations, although our North York site tends to focus on primary care and have a younger referral base. All of our services are back in-person but, if clinically appropriate, we do offer a variety of psychological services online through secure video, at the client's request. Although we operate as a private practice, part of our mission is to provide accessible mental health care to our community and we do this in several ways: through our Access FPC program, which offers low cost and pro bono services to hundreds of children and their families each year, and through a partnership with Regent Park Community Centre, providing pro bono assessment and therapy to youth and their families.

Forward Thinking Psychological Services (FTPS)

Forward Thinking Psychology Services (FTPS) is a multidisciplinary collaborative group practice. Associates in the practice have diverse backgrounds and include psychologists, social workers, doctoral level therapists and a couples and family therapist. FTPS focuses on evidence-based assessment and treatment (individual and group) for individuals with OCD, anxiety disorders and OCD related disorders. We also see clients with a range of other presenting issues as well, including depression, trauma, and executive functioning difficulties.

We work with youth, young adults, adults, parents, families and couples. We provide a wide range of psycho diagnostic assessments, with a focus on ADHD and ASD assessments for adults. Residents will be provided with consultation, supervision and training in a variety of interventions, including cognitive behavioural therapy (CBT), exposure and response prevention (ERP), inference-based CBT (I-CBT) for OCD, acceptance and commitment therapy (ACT) as well as dialectical behaviour-informed therapy (DBT). Our approach to assessment and intervention is neuroaffirming and adapted to the strengths and diversity of each individual we work with. Supervision, teaching and learning from each other are priorities within our practice. Our team meets monthly to engage in didactic learning, discuss challenging cases and learn from each other in a collaborative space. Assessment team meetings also take place monthly to allow for specific discussions and collaboration regarding complex diagnostic presentations. Professional development is provided through in-house and external speakers on a regular basis. FTPS delivers treatment across Ontario, BC, Nova Scotia and New Brunswick. We are mostly virtual and have a bookable space in midtown Toronto. www.ftpsych.ca

Consortium Partner Descriptions (Adult Track)

Toronto Metropolitan University's Centre for Student Development and Counselling (CSDC)

Set in the heart of downtown Toronto, Toronto Metropolitan University is home to 36,000 full-time undergraduate students and 2,500 graduate students, with a culturally diverse student population from 146 countries. The Centre for Student Development and Counselling is part of a larger department - Student Wellbeing, which consists of the CSDC, Health Promotion, the Medical Centre and Academic Accommodation. The CSDC provides direct service to over 2,000 students annually through individual therapy, group therapy, and psycho-educational workshops. The Department of Student Wellbeing is a multi-disciplinary team consisting of psychologists, social workers, registered psychotherapists, a health promotion nurse, psychiatrists and general practitioners

University Health Network

University Health Network (UHN) is Canada's leading research academic hospital. Building on the strengths and reputation of each of its programs, UHN brings together the talent and resources needed to transform lives and communities through excellence in care, discovery and learning. Our primary value above all else is that patients come first. Additional values include: Safety, Compassion, Teamwork, Integrity and Stewardship. UHN is a network of teaching hospitals that comprises: The Princess Margaret Cancer Centre, Toronto General Hospital, Toronto Western Hospital, West Park Healthcare Centre and the five sites of the Toronto Rehabilitation Institute covering ten program areas. Across the five hospitals are numerous inpatient and outpatient units focusing on care in a diverse range of medical issues and complex diseases. UHN serves the needs of both younger and older adults from a large catchment area with diverse cultural backgrounds.

Psychologists work at the intersection of medicine and mental health within interdisciplinary team settings to provide exemplary care for patients dealing with a range of complex medical issues with a focus on assessment, diagnostics and interventional techniques.

<http://www.uhn.ca/>

York University Psychology Clinic (YUPC)

YUPC is a state-of-the art community mental health clinic and training centre associated with the Department of Psychology in the Faculty of Health and located on the Keele Campus of York University. The clinic was established several years ago with a main goal to enrich training experiences for York's two clinical doctoral psychology programs: Clinical Developmental which primarily focuses on the infant/child/youth populations and Clinical which primarily focuses on the adult population. Both programs are CPA accredited. The Clinical Area offers opportunities to engage in clinically-relevant research in psychotherapy process and outcomes, neuropsychology, health psychology and personality.

The clinic provides a range of leading edge, effective mental health services on a fee for service basis to keep people of all ages living healthy, productive lives. The clientele are not restricted to those seen in a typical university counselling service but rather are a broad range of community and university referrals of individuals, couples and families who live in the Greater Toronto Area. Services include comprehensive psychological assessments (psycho-educational, psycho-diagnostic and neuropsychological), therapy (individual and group) and health promotion activities such as mindfulness meditation groups.

Residency Program: Child Track (School-Clinical)

Please note that during the COVID pandemic or future waves, clinical services and training programs at all sites may be adjusted in line with infection prevention and control advisories from Public Health and the Ministry of Health.

Residents will be assigned to a school psychology rotation within the TCDSB and participate in a major rotation in clinical child psychology at either Family Psychology Centre, Broadview Psychology or Forward Thinking Psychological Services®, depending on the results of the match. Each resident will spend 2.5 days a week in the school boards, 2 days a week at one of the clinical training sites, and .5 days a week attending the joint didactic portion of the training program.

A typical schedule of rotation is outlined in the table below.

Rotation	Days/ week	Months	Location	Description
Major School Psychology	2.5 days per week	Sept. – June	TCDSB	Elementary and Secondary School Psychology Rotation Minor rotations or special projects (see list in brochure) may be sought.
Major Clinical Child Psychology	2 days per week	Sept. – June.	One of: Broadview FPC Forward Thinking	See descriptions in the body of the brochure.

Seminars/ Resident Meetings	Friday PM .5 days	Sept. – Aug.	TBD	Didactic seminars, professional development, resident meetings
Summer	4.5 days	July- Aug	All clinical sites	School board hours revert to clinical sites.

Overview of Clinical Rotations

Rotation in School Psychology

Toronto Catholic District School Board (TCDSB)

Psychological Services staff at the TCDSB are assigned to specific schools (elementary and secondary) and are members of each school's interdisciplinary team which also includes Social Workers, Speech-Language Pathologists, Assessment and Programming Teachers, the school Principal and appropriate school staff.

At the TCDSB, psychological service provision is based on a multi-tiered prevention/intervention model, whereby the intensity of supports and the levels of interventions are provided based on need. At the primary (Tier 1) level, consultative support and broad scale universal preventative and proactive interventions are provided to entire schools or classrooms. These may include whole class prevention programs, as well as the provision of professional development and training (to teachers, guidance counselors, school administrators and support staff) on topics such as, e.g. mental health, special education needs of students with disabilities, classroom behaviour management, etc. At the secondary (Tier 2) level, targeted prevention and intervention is provided to at-risk groups or individuals. These may include the provision of needs-based group intervention (e.g., anxiety reduction, anger management, social skills development), focused consultation to teachers and school staff, crisis response, and involvement in threat and risk assessment teams. At the tertiary (Tier 3) level, intensive intervention and remediation efforts are tailored to individuals with significant needs. These may include psychological assessment, development of positive behaviour support plans and safety plans, behavioural assessment and programming, participation on specialized support teams (e.g., autism team, alternative education team), implementation and evaluation of individualized programs, and provision of individual counseling and treatment.

Residency opportunities are available at all levels. Supervision is provided by psychologists with declared competency in School Psychology (and potentially in Counselling, and/or Clinical Psychology). The following Major School Psychology Rotations and special projects are available:

Major School Psychology Rotation: Elementary and Secondary School Psychology Rotation (TCDSB)

In this rotation, residents will receive assignments to one Elementary and one Secondary School. Within each of these schools, they will work alongside a Psychologist, and will complete the following professional activities: conduct teacher focused consultations, participate in the school's interdisciplinary team meetings and case conferences, provide professional development presentations to school staff or parents, conduct full psychological assessments, write reports (tailored to address the needs of parents and the school system), work with classroom teachers and special education teachers to translate assessment findings

to Individual Education Plans (IEP) for students, present at Identification, Placement and Review Committee meetings, provide intervention/counseling.

Other opportunities for residents may include: Participating in our annual student-lead mental health awareness initiative ("Stop the Stigma") offered in secondary and some elementary schools, providing crisis intervention, working with other professionals to run intervention groups (e.g. social skills, cognitive-behavioural groups).

In addition, residents will be invited to participate in professional development activities/events organized regularly for the members of the TCDSB Psychological Services Department.

Special Projects:

There are a variety of other types of services within the TCDSB that are supported and/or led by Psychological Services, such as providing and overseeing school-wide and board-wide mental health initiatives (e.g. the annual student mental health conference), providing classroom based mental health prevention programs, involvement in program design and implementation for students with special education needs, participating in evaluation of new and/or existing intervention programs, etc. These services are provided in a collaborative interdisciplinary context and may not be tied to a specific school. Residents may choose to participate in one or more of these services.

In addition to the above, there are specialized services provided by Psychological Services staff to support students with complex needs. Involvement in such services will allow for the opportunity to gain experience and develop skills in working with students with specific needs or disabilities. Residents may participate in interdisciplinary teams servicing the Autism Programs (system wide); the Alternative Secondary School Program (which provides support to students aged 16 to 21); and the Alternative Program for students who have been expelled from elementary or secondary school due to struggles with noncompliance, aggression, and disruptive behavior. Residents will have an opportunity to gain experience in consultation to teachers, support staff, and parents; conducting psychological, social-emotional, or behavioural assessment, counselling and/or intervention, depending on the presenting need; and liaising with service providers in the community (e.g., hospitals, mental health agencies, juvenile justice system, etc.).

Residents will work with their primary supervisor (allocated by the chief psychologist) to select and organize participation in one or more of these specialized services over the year, depending on each resident's interest and training goals and the opportunities available. Residents may be involved with a secondary supervisor while in these special team placements.

Contact: Marie-Josée Gendron, Ph.D., C.Psych. *Acting Chief of Psychological Services*

Major Child and Adolescent Clinical Psychology Rotations

Broadview Psychology DBT Program

Clinical Opportunities at Broadview Psychology:

Residents will work within a dynamic, stimulating, and supportive team to provide empirically based treatment (primarily DBT and CBT) to clients who have difficulties related to emotional

and behavioural dysregulation. Broadview Psychology specializes in providing comprehensive and adherent outpatient DBT to clients and their families. DBT aims to help clients to improve their ability to be mindful, accepting, validating and regulating of their emotions, such that they are not engaging in impulsive, avoidant or ineffective behaviour due to their emotions. Residents will have the opportunity to provide the following DBT or CBT services:

- DBT assessment and case formulation of children, adolescents, and/or young adults
- DBT skills groups (co-facilitated) for children, adolescents, young adults, and/or parents
- CBT, ACT or Mindfulness groups (co-facilitated) for adolescents, or young adults to address depression, social anxiety, OCD, or body image issues
- DBT and CBT individual therapy for children, adolescents, or young adults
- DBT phone and text coaching with adolescents, young adults, or parents
- DBT or EFT parent or family therapy

If interested, residents may improve their testing and conceptualization skills by providing psycho-diagnostic, psychoeducational, ASD, ADHD and gifted assessments to children, adolescents or young adults.

Educational Opportunities:

Residents will have the opportunity to receive extensive training while at Broadview Psychology as this is an important component of the clinic. They will participate in weekly training sessions on providing DBT to adolescents, young adults, and families (minimum of 32 hours). They will attend training or consultation sessions provided to the Broadview Psychology team based on the team's educational needs. Residents will take part in weekly DBT consultation team meetings at which they will receive consultation from and provide consultation to team members. Residents may also attend relevant external trainings, financed by Broadview Psychology.

Research Opportunities:

Broadview Psychology has a program evaluation team headed by Dr. Vaunam Venkadasalam, that coordinates ongoing evaluation of our clinic, as well as evaluation of particular time-limited services. Residents will meet with this team to choose a program evaluation project using existing data or by collecting new data. They may engage in a process or summative evaluation of any of our primarily DBT or CBT services.

Supervision:

Broadview Psychology places an emphasis on supervision and provides weekly supervision to all trainees and consultation to all registered clinicians. Residents will receive a minimum of 1 hour of weekly individual supervision with a registered psychologist, and 2 hours of weekly group consultation/supervision at DBT consultation team meetings. They will also receive supervision on an as needed basis with primary supervisors, assessment supervisors, co-facilitators of groups and with colleagues. Supervisors will be available at all times for emergency consultation. Supervision will occur through discussions of clinical, professional and ethical questions and issues, and the review of session recordings.

Supervision opportunities for residents:

Residents will have the opportunity to supervise a more junior clinician during the second half of the year. They will also provide consultation to any members of the clinical team both formally through consultation team meetings and informally through ongoing collaboration on cases.

Supervisors:

Christine Sloss, Ph.D., C.Psych (child, adolescent, adult, family, parent, couple)

Petrice Gentile, Ph.D., C.Psych (child, adolescent, parent)

Family Psychology Centre

Clinical Opportunities

Consultation and Treatment

As a clinical teaching site, our residents and trainees are a priority at FPC. Residents will practice within a supportive, highly skilled interdisciplinary team in the provision of psychological services including EFT, EFFT, MI, CBT, DBT, family therapies, amongst other treatment approaches. Residents can choose up to three core modalities on which to focus their training, although exposure to other areas is also supported. As a community-based mental health clinic, we receive referrals at all levels of complexity and chronicity, from a child's first panic attack to early signs of psychosis in a young adult. In addition to common clinical disorders such as anxiety, ADHD, and depression, we have developed a strong reputation for treating complex intergenerational trauma, infant mental health, obsessive-compulsive disorder, eating disorders, and the mental health challenges faced by neuro-divergent youth. Clinical supervision is provided by experienced psychologists registered to supervise child, adolescent, and family psychology and residents can expect training in consultation, advanced clinical interviewing skills, treatment planning and implementation, evaluation of treatment progress, and the option to participate in clinical research activities. Residents are also supported in their own trajectory of growth through our Emotion Focused Training Team- a group supervision experience that includes demonstration, didactic video presentation, and skills practice in a safe and collaborative environment.

Clinical Assessment

Residents are provided with the opportunity to conduct a small number of complex, comprehensive assessments with a focus on socio-emotional disorders and/or specialized clinical questions. The specialized assessments include clinical queries of ADHD, eating disorders, OCD, and ASD. Our supervising psychologists also have many years of experience practicing in school board settings and residents will receive training in providing consultation to public and private schools when sharing assessment feedback and to support a therapy client.

Educational Opportunities

FPC engages residents and other psychology trainees in a series of didactic and experiential learning opportunities. Residents can choose to attend two or more topics from the Clinical Seminar Series that are held throughout each year: 1. Family Therapy; 2. Motivational Interviewing; 3. Play and Art Therapy; 4. ERP for Obsessive-Compulsive Therapy; 5. DBT for

Adolescents; and 6. Trainee Choice Series, which is determined each year depending on the interests of the residents and practicum students.

All trainees are required to attend the Emotion Focused Training Team, a monthly training group held on Mondays from 10 a.m. to 12 p.m. and facilitated by Dr. Mirisse Foroughe. Additional trainings are offered throughout the residency, including formal clinician trainings in Emotion Focused Family Therapy and Emotion Focused Therapy for Youth.

Research Opportunities

Residents are welcome to engage with the Emotion Transformation Lab, a 12-member clinical research institute in collaboration with York University and the University of Waterloo. Opportunities to participate in program evaluation or clinical trials are available to residents.

Clinical Supervisors

Mirisse Foroughe, Ph.D., C. Psych.

Forward Thinking Psychological Services ®

Clinical Opportunities at Forward Thinking Psychological Services ®

Residents will have the opportunity to work within an enriching and collaborative team and learn to deliver evidence-based assessment and treatment approaches for adolescents, emerging/young adults and parents. Clinical opportunities will be tailored to individualized learning goals.

Our clinic specializes in the provision of assessment and treatment for individuals experiencing symptoms of OCD, OCD related and anxiety disorders. Our team also focuses on comprehensive assessment for young adults seeking ASD and/or ADHD assessments. We also work with individuals presenting with other issues, including depression, emotion dysregulation, trauma, interpersonal challenges and executive functioning difficulties. We receive diverse referrals from the community, psychiatrists, inpatient hospitals and residential treatment programs. Residents will receive exposure to a depth and breadth of psychological disorders.

Residents will have the opportunity to learn approaches for adolescents, emerging/young adults and parents, focusing on both assessment and intervention:

- CBT interventions for OCD and OCD-related disorders, with a focus on ERP and ACT-based approaches
- Inference-Based CBT for OCD
- CPT for PTSD and trauma-related disorders
- ACT and DBT-informed approaches for a variety of other disorders including anxiety disorders, depression and executive functioning challenges
- Comprehensive psycho diagnostic assessments (older adolescents), ASD and/or ADHD assessments (older adolescents, young adults)
- Assessment feedback sessions take place with a supervisor present to enhance learning and growth

FTPS delivers treatment across Ontario, BC, Nova Scotia and New Brunswick. We are mostly virtual but we do have a space in midtown Toronto that we can book in-person sessions.

Educational Opportunities:

Our team meets once a month to engage in didactic learning, discuss challenging cases and learn from each other in a collaborative space. Monthly assessment team meetings allow for discussions and collaboration regarding complex diagnostic presentations. In-house professional development is also delivered and includes a focus on OCD-related clinical skills, parent coaching work, couples and family therapy interventions, therapeutic ruptures and repair and attachment-informed approaches. We also deliver workshops and training through our relationship with a practice collaborative, which have included training on Grief Therapy, Acceptance and Commitment Therapy, and Gender Transitioning.

Research Opportunities:

Forward Thinking engages in ongoing data collection and program evaluation. Residents will have the opportunity to work on a program evaluation project using the existing data collection tools or are welcome to discuss a new data collection project. Residents will work closely with Dr. Taube-Schiff on this project.

Supervision:

Forward Thinking places great emphasis on supervision and strives to ensure that all team members feel well supported. Supervision is provided in individual and group settings to allow for enhanced learning from others and individualized teaching time. Supervision is highly interactive and consists of role plays, didactics, reviews of notes and video recordings. Supervisors are readily available through asynchronous supervision and immediately for any potential emergency. Residents will have access to a shared drive that provides comprehensive information on a multitude of assessment and treatment interventions.

Supervision opportunities for residents:

Residents are able to supervise a more junior clinician during their residency year. They are also encouraged to present clinical cases at team meetings and assessment meetings. Residents will also have the opportunity to collaborate with other team members as well as professionals in the community, as needed.

Supervisors:

Marlene Taube-Schiff, Ph.D., C. Psych., R. Psych. (adolescent, adult, assessment) (Main contact)

Nicole Dent, Ph.D., C. Psych. (adult, assessment)

Hannah Bigelow, Ph.D., Psychologist (supervised practice) (child, adolescent, adult, assessment)

Tahira Gulamani, Ph.D., Psychologist (supervised practice) (adult, assessment)

www.ftpsych.ca

Didactic Program

Friday Afternoons

Didactic seminars will often be scheduled on Friday afternoons and the location for these seminars will be released closer to the start of the residency program in September 2026. All residents will attend these didactic seminars, participating in discussions of issues relating to professional practice in clinical psychology. . Residents will also attend meetings with one of the Co-Directors of Training on scheduled Fridays and these will be arranged when the seminar schedule is finalized.. There are also several joint seminars for all GTA residents as well as national seminars for residents across Canada. From time to time, the joint seminars take place on Friday mornings.

Summer Rotation (Clinical Sites)

Over the months of July and August, residents in the School-Clinical track will no longer be involved in their School Psychology rotations. During this time, residents will increase their clinical training experiences through transferring the balance of their hours to their clinical sites thereby expanding clinical work at their community settings. As well, there may be some clinical or research opportunities at other clinical sites.

At a minimum, 25% of residents' time will be spent in the provision of direct face-to-face of psychological services to clients. Direct time will not exceed two thirds of training time.

Residency Program: Adult Track

Overview of Adult Clinical/Counselling, Clinical and Neuropsychology Rotations

Major Clinical/Counselling Rotations

Residents in the Clinical – Counselling Psychology positions will be assigned to either, 1) a half-time major rotation at Toronto Metropolitan University Centre for Student Development and Counselling and a half-time major rotation at the York University Psychology Clinic (YUPC); or 2) a half-time major rotation at Toronto Metropolitan University Centre for Student Development and Counselling and a half-time rotation at Broadview Psychology. Assignment will depend on student preference, experience in intervention, best fit considerations and will take place post-match. In addition, residents will spend one half-day per week at OISE from September to August.

Major Clinical / Counselling Psychology Rotations

Time Period	Days per Week	Site	Description
September – February	2.0 days	Site A	Major Clinical /Counselling Psychology rotation. See descriptions in the body of the brochure.
September – February	2.5 days	Site B	Major Clinical /Counselling Psychology rotation. See descriptions in the body of the brochure.
March – August	2.5 days	Site A	Mid-year schedule switch to ensure balanced training across placements.
March – August	2.0 days	Site B	Mid-year schedule switch to ensure balanced training across placements.

Available Clinical Sites:

- TMU and Broadview
- Forward Thinking and Eating Disorders Program, UHN
- TMU and CSDC

Seminars / Resident Meetings

Rotation	Days per Week	Months	Location	Description
Seminars / Resident Meetings	0.5 day	September – August	Friday afternoons, TBD	Didactic seminars, professional development, and resident meetings

Optional one-sentence caption (recommended)

Residents are assigned to two clinical sites and alternate between 2.0 and 2.5 days per week at mid-year.

Please note that during the COVID pandemic, future waves, or any other pandemic/health crises, clinical services and training programs at all sites may be adjusted in line with infection prevention and control advisories from Public Health and the Ministry of Health.

Toronto Metropolitan University Centre for Student Development and Counselling

The CSDC offers a range of short-term evidence-based treatments. This residency will focus on training for both individual and group treatments as well as on knowledge of current clinical research on best practices and new developments in treatment approaches.

Assessment occurs through our semi-structured initial consultation appointments, structured suicide risk assessments, and ongoing monitoring and assessment of client symptoms and progress through client self-report. Recognition of the developmental stage of the majority of our clients (late adolescents and young adults) is integral to assessment, treatment and therapeutic alliance, as is understanding of their cultural background, gender and any other relevant factors. Considerable attention is given to lifestyle changes, coping skills and adjustment issues within the context of specific disorders. Residents will have an exciting opportunity to work with an exceptionally diverse student body as our students come from a broad range of cultures, and present to the CSDC with a broad range of diagnostic issues.

Description of Training Activities:

Individual Therapy Training Rotation:

CBT Rotation: Training will focus on diagnosis, formulating a CBT collaborative case conceptualization incorporating predisposing and protective factors, using standard CBT session structure, forming and sustaining a positive therapeutic alliance, and following standard CBT treatment protocols for a wide range of disorders: Anxiety Disorders, Depressive Disorders, Insomnia (within the context of Depression), IBS, OCD Spectrum Disorders, and PTSD. We also provide short-term treatment for relationship issues, adjustment difficulties, dealing with family break up, grief, and loss. As adjunct to these protocols, there will be considerable emphasis on strengths-based CBT and integration of the development of a personal model of resilience into appropriate cases. Training in crisis intervention skills and suicide risk assessment training and intervention is incorporated into client case management, as appropriate. Supervision is conducted from a developmental framework. Methods of supervision include discussion of cases, listening to audio recordings of sessions together, loan of DVDs by master clinicians, and co-therapy as appropriate. Techniques of supervision include: modeling, role-plays and role rehearsal.

Emotion Focused Therapy (EFT) Rotation:

Training in EFT will take into account each resident's unique developmental needs for the effective use of emotion focused therapy. Skill development will begin with review of verbal and nonverbal communication skills and empathic attunement underlying therapeutic presence as a foundation for building rapport and trust. Skill development will progress through exposure to relevant emotion theory and its application to practice, alongside development of competence in a range of marker-driven emotion focused therapy interventions including empathic attunement, promotion of affective experience, reprocessing tasks, and use of emotion to transform emotion through evocative tasks. Concurrently, residents will be exposed to concepts of process diagnosis and case conceptualization within an EFT framework. Residents may expect to work with individual clients presenting with a range of anxiety and mood disorder symptoms.

Interested residents may request to co-facilitate an EFT group with a focus on the use of two-chair tasks to resolve self-critical splits. Training in crisis intervention skills and suicide risk assessment is incorporated into client case management, as appropriate. Methods of supervision include completion of assigned independent reading and review of selected APA DVDs, experiential and self-reflective learning, collaborative review of resident's audio recorded sessions, and discussion of cases.

Group Therapy Training Rotation:

Training in group therapy will focus on theory and practice of group therapy. Residents will be given the option of breadth (co-facilitating a wide range of groups) and/or the option of depth (focusing on a specific protocol for one or two disorders and co-facilitating several groups for that population). Opportunities to co-facilitate groups with your group therapy supervisor or another clinical psychologist include: CBT for depression, generalized anxiety, social anxiety, or panic disorder. Interested residents may request to co-facilitate an EFT group with focus on the use of two-chair tasks to resolve self-critical splits. Additional therapy groups offered by the CSDC include: mindfulness meditation for stress reduction, relationship lab: learning dating and couples skills, family relationships, tame your critic, facing loss, sexual violence support group and support group for eating disorders. A complete listing of current therapy programs may be viewed at the CSDC website at <https://www.torontomu.ca/student-wellbeing/counselling/>

Rotation goals

Residents will:

- develop competence in delivering evidence-based psychotherapy, delivering both individual CBT, EFT and group therapy to diverse clients with a wide range of presenting issues/disorders.
- consolidate their training in suicide risk assessment and crisis intervention, and increase awareness of ethical dilemmas as they pertain to these issues, develop group facilitation skills for a wide range of presenting issues/disorders using evidence-based interventions
- acquire basic motivational interviewing skills
- refine their documentation skills, and enhance their identities as professionals in the field of clinical psychology

Supervision:

At **CSDC**, for the individual CBT rotation, residents will participate in weekly individual and group supervision. Individual supervision includes a weekly review of cases, diagnostic clarification, case conceptualization, treatment planning, case management, discussion of ethical dilemmas, and discussion of professional practice issues as they arise. This also involves the supervisor periodically listening to the resident's audio recording of sessions and review and co-signing of all session notes, referral letters and reports. Group supervision occurs in the context of our weekly 2-hour micro-skills seminars; whereby residents and practicum students present cases as they pertain to the topic of the week.

For the Group Therapy rotation, supervision will include discussion of best practices within group therapy, review and preparation for each group session prior to each group, and discussion and debrief analysis after each group. Group dynamics, client progress, therapy interfering behaviours, etc. will be discussed and addressed. Session notes will be reviewed and co-signed by the supervisor. Residents will initially observe and then will co-facilitate these therapy groups with their supervisor.

Supervisors:

Dr. Immaculate Antony, C.Psych immaculate.antony@torontomu.ca

Dr. Jesmen Mendoza, C. Psych. j5mendoz@torontomu.ca

York University Psychology Clinic

The YUPC rotation will be primarily affiliated with the Clinical training program and focus on intervention with adult clients who range in age, ethnicity and type of presenting problem. The Clinical doctoral program at York University provides in-depth training in evidence-based intervention strategies that are informed by a humanistic psychotherapy treatment model. Given the increased understanding of the importance of emotional processes in therapeutic change, the program provides a unique training opportunity that focuses on working directly with emotions in therapy. In particular, clinical psychology residents will receive in-depth training and supervision in an integrative, Emotion-Focused Therapy (EFT) treatment approach that highlights the importance of facilitating narrative, emotion, and new meaning making processes when working with a range of client presenting problems, such as MDD, GAD, social anxiety and complex trauma. In addition, opportunities for comprehensive psychological assessment training experiences will be provided tailored to the resident's interests and building upon previous experience with clinical testing of issues related to cognitive, academic and emotional problems. Additional opportunities may include assessments related to identification of autism, ADHD, or learning difficulties, depending on the resident's areas of interest.

Rotation Goals:

By the end of the rotation, goals for our residents include:

- Increased understanding of emotional change principles.
- Increased competency in psychopathology assessment, case formulation and EFT interventions.
- Increased knowledge about professional and ethical issues related specifically to working in a setting similar to a group private practice.

Supervision:

At the **YUPC**, mirroring our client-centred therapeutic approach, the supervision of our residents is done in an individual format focused on the preparation for independent, professional practice. A resident can expect to carry a case load of 5-8 clients and receive a minimum of 2 hrs. of weekly supervision provided by a registered psychologist that includes a review of their videotaped sessions and integrative discussions of didactic material relevant to each case. Residents can also expect to complete 3-5 assessments over the course of the year, with a minimum of 2 hours of supervision per week over the course of the assessment.

Primary Supervisor: Sandra Paivio, Ph.D., C.Psych.

Contact: Dr. Jessica Abrams, Clinic Director: schroede@yorku.ca

Broadview Psychology

Broadview Psychology is a family focused and team based private clinic in central Toronto and Stouffville that provides DBT, CBT, ACT and EFT treatment to children, adolescents, parents, families, adults, and couples with diverse challenges. Its team consists of psychologists, social workers, post-docs, graduate students, behaviour therapists, a dietician and admin staff. Broadview Psychology specializes in treating transdiagnostic clients who have problems in regulating their emotions and behaviour through comprehensive and adherent outpatient DBT. Broadview offers separate DBT programs for children, young adolescents, older adolescents, young adults and adults. Broadview Psychology associates work closely together as a team to provide a wide range of services to clients as well as to their family members, including individual, group, parent, family and sibling therapy, as well as phone/text coaching, educational and career coaching, and exposure therapy.

Rotation goals

Residents will:

- develop competence in assessment and conceptualization skills within a DBT framework
- develop competence in delivering DBT to youth and adults through individual therapy, phone/text coaching, and group skills training
- develop comfort in involving family members in the assessment and treatment process as appropriate
- increase competence in conducting psychoeducation and psychodiagnostic assessments with youth and adults

Description of Training Activities:

Clinical Opportunities at Broadview Psychology:

Residents will work within a dynamic, stimulating, and supportive team to provide empirically based treatment (primarily DBT and CBT) to clients who have difficulties related to emotional and behavioural dysregulation. Broadview Psychology specializes in providing comprehensive and adherent outpatient DBT to clients and their families. DBT aims to help clients to improve their ability to be mindful, accepting, validating and regulating of their emotions, such that they are not engaging in impulsive, avoidant or ineffective behaviour due to their emotions.

Residents will have the opportunity to provide the following DBT or CBT services:

- DBT assessment and case formulation of young adults or adults
- DBT skills groups (co-facilitated) for young adults, adults or parents
- CBT, ACT or Mindfulness groups (co-facilitated) for young adults or adults to address depression, social anxiety, OCD, or body image issues

- DBT and CBT individual therapy for young adults, adults, or family members
- DBT phone and text coaching with young adults or adults
- DBT or EFT parent, couple or family therapy

If interested, residents may improve their testing and conceptualization skills by providing psycho-diagnostic, psychoeducational, ASD, ADHD and gifted assessments to young adults or adults.

Educational Opportunities:

Residents will have the opportunity to receive extensive training while at Broadview Psychology as this is an important component of the clinic. They will participate in weekly training sessions on providing DBT to adolescents, young adults, and families (minimum of 32 hours). They will attend training or consultation sessions provided to the Broadview Psychology team based on the team's educational needs. Residents will take part in weekly DBT consultation team meetings at which they will receive consultation from and provide consultation to team members. Residents may also attend relevant external training, financed by Broadview Psychology.

Research Opportunities:

Broadview Psychology has a program evaluation team headed by Dr. Vaunam Venkadasalam, that coordinates ongoing evaluation of our clinic, as well as evaluation of particular time-limited services. Residents will meet with this team to choose a program evaluation project using existing data or by collecting new data. They may engage in a process or summative evaluation of any of our primarily DBT or CBT services.

Supervision:

Broadview Psychology places an emphasis on supervision and provides weekly supervision to all trainees and consultation to all registered clinicians. Residents will receive a minimum of 1 hour of weekly individual supervision with a registered psychologist, and 2 hours of weekly group consultation/supervision at DBT consultation team meetings. They will also receive supervision on an as needed basis with primary supervisors, assessment supervisors, co-facilitators of groups and with colleagues. Supervisors will be available at all times for emergency consultation. Supervision will occur through discussions of clinical, professional and ethical questions and issues, and the review of session recordings.

Supervision opportunities for residents:

Residents will have the opportunity to supervise a more junior clinician during the second half of the year. They will also provide consultation to any members of the clinical team both formally through consultation team meetings and informally through ongoing collaboration on cases.

Supervisors:

Dr. Christine Sloss, Ph.D., C.Psych (Main Contact; adults, couples, families, adolescents, children); drsloss@broadviewpsychology.com

Dr. Gibran Rodriguez, Ph.D., C.Psych (adults, couples, families, assessments);
drrodriguez@broadviewpsychology.com

Forward Thinking Psychological Services ®

Clinical Opportunities at Forward Thinking Psychological Services ®

Residents will have the opportunity to work within an enriching and collaborative team and learn to deliver evidence-based assessment and treatment approaches. Clinical opportunities will be tailored to individualized learning goals.

Our clinic specializes in the provision of assessment and treatment for individuals experiencing symptoms of OCD, OCD related and anxiety disorders. Our team also focuses on comprehensive assessment for adults seeking ASD and/or ADHD assessments. We also work with individuals presenting with other issues, including depression, emotion dysregulation, trauma, interpersonal challenges and executive functioning difficulties. We receive diverse referrals from the community, psychiatrists, inpatient hospitals and residential treatment programs. Residents will receive exposure to a depth and breadth of psychological disorders.

Residents will have the opportunity to learn approaches for adolescents, young adults, adults and parents, focusing on both assessment and intervention:

- CBT interventions for OCD and OCD-related disorders, with a focus on ERP and ACT-based approaches
- Inference-Based CBT for OCD
- CPT for PTSD and trauma-related disorders
- ACT and DBT-informed approaches for a variety of other disorders including anxiety disorders, depression and executive functioning challenges
- Comprehensive psycho diagnostic assessments (older adolescents and adults), ASD and/or ADHD assessments (older adolescents, young adults and adults)
- Assessment feedback sessions take place with a supervisor present to enhance learning and growth

FTPS delivers treatment across Ontario, BC, Nova Scotia and New Brunswick. We are mostly virtual but we do have a space in midtown Toronto that we can book in-person sessions.

Educational Opportunities:

Our team meets once a month to engage in didactic learning, discuss challenging cases and learn from each other in a collaborative space. Monthly assessment team meetings allow for discussions and collaboration regarding complex diagnostic presentations. In-house professional development is also delivered and includes a focus on OCD-related clinical skills, parent coaching work, couples and family therapy interventions, therapeutic ruptures and repair and attachment-informed approaches. We also deliver workshops and training through our relationship with a practice collaborative, which have included training on Grief Therapy, Acceptance and Commitment Therapy, and Gender Transitioning.

Research Opportunities:

Forward Thinking engages in ongoing data collection and program evaluation. Residents will have the opportunity to work on a program evaluation project using the existing data collection tools or are welcome to discuss a new data collection project. Residents will work closely with Dr. Taube-Schiff on this project.

Supervision:

Forward Thinking places great emphasis on supervision and strives to ensure that all team members feel well supported. Supervision is provided in individual and group settings to allow for enhanced learning from others and individualized teaching time. Supervision is highly interactive and consists of role plays, didactics, reviews of notes and video recordings. Supervisors are readily available through asynchronous supervision and immediately for any potential emergency. Residents will have access to a shared drive that provides comprehensive information on a multitude of assessment and treatment interventions.

Supervision opportunities for residents:

Residents are able to supervise a more junior clinician during their residency year. They are also encouraged to present clinical cases at team meetings and assessment meetings. Residents will also have the opportunity to collaborate with other team members as well as professionals in the community, as needed.

Supervisors:

Marlene Taube-Schiff, Ph.D., C. Psych., R. Psych. (adolescent, adult, assessment) (Main contact)

Nicole Dent, Ph.D., C. Psych. (adult, assessment)

Hannah Bigelow, Ph.D., Psychologist (supervised practice) (child, adolescent, adult, assessment)

Tahira Gulamani, Ph.D., Psychologist (supervised practice) (adult, assessment)

www.ftpsych.ca

University Health Network:

Eating Disorders Program

TORONTO GENERAL HOSPITAL – Eating Disorders Program

The Toronto General Hospital Eating Disorders Program provides assessment and intensive treatment to adults (age 17+) with eating disorders and other comorbid mental health conditions. Our program includes inpatient, intensive outpatient and individual therapy outpatient treatment services.

Residents will have the opportunity to work with adults of various ages and with a range of eating disorder diagnoses including anorexia nervosa, bulimia nervosa, other specified feeding or eating disorder (OSFED) and avoidant/restrictive food intake disorder (ARFID). (Note that we do not provide services for binge eating disorder.) Our patients commonly have comorbid mental health concerns including mood and anxiety disorders, posttraumatic stress disorder, obsessive compulsive disorder, substance use disorders, personality disorders, and other

difficulties with emotion regulation and impulsivity. Our treatment program is focused on trauma-informed, evidence-based care within a cognitive behavioural framework. Residents will have the opportunity to perform semi-structured diagnostic assessments, provide structured individual CBT including Enhanced CBT for Eating Disorders (CBT-E), CBT for ARFID, inpatient CBT sessions, and group CBT and/or DBT, as well as participate in multidisciplinary clinical team meetings. The rotation typically includes time in both the inpatient and outpatient settings.

A resident's typical experience in this rotation includes approximately 2 days of clinical service provision including assessment, treatment and documentation, and 0.5 day of supervision and training. Our clinic also conducts a variety of research projects, including related to the processes and outcomes of CBT-based treatments for eating disorders, eating disorders and emotion regulation, and the treatment of comorbid eating disorders and PTSD. Residents are welcome to contribute to ongoing research projects as part of the rotation if this is of interest.

Danielle MacDonald, Ph.D., C.Psych., Danielle.macdonald@uhn.ca

Major Adult Neuropsychology Rotations

Residents in the Adult Neuropsychology position will be assigned to two half-time major rotations at Toronto Western Hospital (TWH) and two half-time minor rotations at Princess Margaret Cancer Centre (PMH) and Toronto Rehab Institute (TRI). The resident will spend 2.5 days per week at TWH, 2 days per week at their minor rotation, and .5 days a week at OISE/UT for the joint didactic portion of the training program.

A typical rotation schedule is outlined in the table below:

Rotation	Days/week	Months	Location	Description
Epilepsy Surgical Program	2.5 days	Sept. – Feb	TWH	See descriptions in the body of the brochure.
Neuro-Oncology/ Pediatric Aftercare Programs	2 days	Sept. – Feb	PMH	See descriptions in the body of the brochure.
Movement Disorder/DBS Program	2.5 days	Mar-Aug	TWH	See descriptions in the body of the brochure.
Rehabilitation/ Intervention	2 days	Mar-Aug	TRI	See descriptions in the body of the brochure.

Seminars/Resident Meetings	.5 days Friday afternoons	Sept. – Aug.	TBD	Didactic seminars, professional development, resident meetings
----------------------------	---------------------------------	-----------------	-----	---

Overview of Adult Neuropsychology Rotations

TORONTO WESTERN HOSPITAL – Epilepsy Surgical Program.

The primary responsibility of the neuropsychologist in this program is to evaluate patients with focal epilepsy to inform surgical planning and decision-making, as well as to evaluate post-operative cognitive changes. The primary role of the resident is to conduct comprehensive individual assessments, write integrative reports, and provide feedback to patients, their care-partners, and the interdisciplinary epilepsy surgical team. The resident will participate in weekly epilepsy surgery rounds and contribute to decision-making regarding surgical candidacy alongside professionals from neurosurgery, neuroradiology, neurology, nursing, and electrophysiology. This setting may also include exposure to special procedures for neurosurgical candidates where possible (e.g., fMRI and electrocorticography for language mapping, Wada procedure). For breadth of training, residents may also be exposed to a wider array of adult patients with varied referral questions from other neurological and neurosurgical programs within UHN including non-surgical epilepsy patients and individuals who have sustained multiple concussions.

Contact Psychologist:

David Gold Ph.D, C.Psych. david.gold@uhn.ca

Devon Andersen, Ph.D., C.Psych. devon.andersen@uhn.ca

TORONTO WESTERN HOSPITAL – Movement Disorders/Deep Brain Stimulation Program.

The primary responsibility of the neuropsychologist in this program is to evaluate patients with Parkinson's disease to inform surgical planning and decision-making (i.e., Deep Brain Stimulation or DBS) and to evaluate post-operative cognitive changes. The primary role of the resident is to conduct comprehensive individual assessments, write integrative reports, and provide feedback to patients, their care-partners, and the interdisciplinary DBS team. The resident will participate in monthly DBS rounds and contribute to decision-making regarding surgical candidacy alongside professionals from neurosurgery, neurology, and neuropsychiatry. For breadth of training, residents may also be exposed to a wider array of senior patients with varied referral questions from other neurological and neurosurgical programs within UHN including other movement disorders, stroke, and memory disorders.

Contact Psychologists:

Melanie Cohn, Ph.D, C.Psych. melanie.cohn@uhn.ca

Marta Statucka, Ph.D, C.Psych. marta.statucka@uhn.ca

PRINCESS MARGARET CANCER CENTRE – Neuro-Oncology and Pediatric Aftercare Programs.

The primary responsibilities of the neuropsychologist in this program are to identify the effects of cancer and/or cancer treatments on neurocognitive outcomes in adults with primary brain tumours and adult survivors of childhood cancers. The primary role of the resident is to conduct comprehensive individual assessments, write integrative reports, and provide feedback to patients, their care-partners, and health care team. The resident will also participate in weekly multidisciplinary brain tumour rounds alongside professionals from neuro-oncology, radiation oncology, nursing, and psychosocial oncology. Addressing mood issues is a key component of the interview and feedback processes at this site. This setting may also include exposure to psychoeducation groups for cognitive impairment in cancer survivors, support groups for patients with brain tumours or their caregivers, and groups specific to adolescent and young adult cancer survivors.

Contact Psychologist:

Angela Sekely, Ph.D, C.Psych. angela.sekely@uhn.ca (Note: LOA until January 2027, alternate contact: Martha McKay, Ph.D., C,Psych, UHN Discipline Head for Psychology, martha.mckay@uhn.ca)

TORONTO REHAB – Spinal Cord Rehab, Lyndhurst Site.

The Spinal Cord Rehabilitation Program offers both inpatient and outpatient services for individuals who have sustained either a traumatic or non-traumatic spinal cord injury.

Outpatient therapy and specialty clinics are designed to address any concerns our clients may have relating to their independence and overall health, while the inpatient program is designed to be a short-term rehabilitation program and is intended to help patients maximize independence and functional status in preparation for their return to the community. It is an adult program for patients 18 years of age and older. An individualized and interdisciplinary rehabilitation program has been developed to address the specific needs of each patient admitted to the program. The interdisciplinary team consists of physiatrists, general practitioners, physiotherapists, occupational therapists, social workers, consulting psychiatrist, recreation therapists, nurses, speech language pathologists, respiratory therapists, and spiritual care.

As a resident in this rotation, you will be working with spinal cord injury patients in both the inpatient and outpatient setting. Residents will also have the opportunity to work with individuals who have sustained a spinal cord injury concurrent with several clinical conditions including acquired and traumatic brain injury, neurological disorders, psychiatric disorders, substance use disorders, and mild cognitive impairment. The role of the resident will be to provide clinical interventions that could include cognitive behavioral therapy interventions; mindfulness based intervention; interpersonal therapy, supportive counseling and cognitive remediation as part of the clinical training experience. In addition, residents will have an opportunity to provide group intervention, and to co-facilitate an inpatient group program designed to support individuals adjusting to spinal cord injury. Residents will also have the opportunity to work within an interdisciplinary inpatient clinical team and actively participate in case conferences, as well as gain experience in the areas of health psychology and rehabilitation psychology. Residents are assured diversity of experiences across the age span (transitional age youth, adult, older adult) and cultural and socio-economic backgrounds. Residents will be supervised by two supervisors (Dr. McKay and Dr. Yao) within the rotation.

Contact Psychologists:

Martha McKay, Ph.D., C.Psych.

martha.mckay@uhn.ca

Christie Yao, Ph.D., C.Psych. christie.yao2@uhn.ca

Supervision at UHN:

At **UHN**, supervision of residents will be provided by staff who are registered with the College of Psychologists and Behaviour Analysts of Ontario and who have an established record of both supervision and mentoring. At a minimum, residents will receive 4 hours per week of supervision across their rotations.

Educational Opportunities/Didactic Seminars

There are a wide variety of educational experiences available to residents across the consortium sites. Each rotation includes educational and training activities, such as multidisciplinary case conferences and workshops. In addition, residents are encouraged to take advantage of a wide variety of other professional development activities including professional lectures, weekly grand rounds, workshops, seminars,

and professional conferences. A partial list of opportunities available across sites is provided below.

Broadview Psychology:

Residents will attend 32+ hours of training in providing DBT to youth and families during the first four months of their residency. Throughout the residency, they will participate in a weekly 2 -hour DBT consultation meeting, in which team members consult, teach, model and learn from one another. Residents will also participate in periodic training or consultation sessions that are provided to the team at Broadview Psychology by Broadview psychologists, or by external psychologists. Trainings and consultations often relate to the treatment of BPD, self -harm, suicidality, eating disorders, substance use disorders, OCD, and PTSD, and are provided by clinicians skilled in the use of DBT, CBT or ACT. They may receive training through watching videotapes and webinars that the clinic owns to help clinicians with their education and development. Finally, they may choose to attend external relevant trainings financed by Broadview Psychology.

Forward Thinking Psychological Services ®:

Forward Thinking offers a variety of educational opportunities throughout the year. All residents throughout the consortium will be apprised of the scheduling and will be welcome to attend. In-house professional development is delivered and often includes a focus on OCD-related clinical skills. Topics will also include clinical skills related to individual therapy work, neurodivergent assessment skills, parent coaching, and couples and family therapy. We also deliver workshops and training through our relationship with a practice collaborative, which have included training on Grief Therapy, Acceptance and Commitment Therapy, and Gender Diversity and Gender Affirming Care.

TMU, CSDC

We offer a weekly, two -hour seminar/group supervision for all trainees on (1) CBT theory and interventions, (2) EFT theory and interventions and (3) common factors relating to therapeutic alliance and empathy. Our residents attend weekly case management meetings and monthly professional development seminars offered to all CSDC staff.

UHN

Within each rotation, residents will be expected to attend mandatory patient rounds as well as didactic seminars. In addition, residents are encouraged to take advantage of a wide variety of other professional development activities including: interdisciplinary clinical teaching rounds; research rounds; weekly grand rounds; psychology team

meetings; an education series for patients and families; as well as weekly and monthly journal club meetings.

YUPC

Being associated with and housed in an academic institution enables YUPC to provide a range of training and education activities throughout the residency year. There are monthly clinical rounds in which guest speakers present on a variety of therapeutic issues. In addition to these rounds, the resident will be offered the opportunity to attend similar rounds where the focus is on neuropsychology and health psychology topics, subspecialties with the York University Clinical Doctoral Program. YUPC also sponsors a number of continuing education programs to community-based professionals that the resident will have an opportunity to attend.

Supervision

Psychological services provided by the resident are supervised by supervisors who are doctoral-level and experienced psychologists, registered within their jurisdiction of practice, and deemed competent to provide the kind of psychological service for which they are providing supervision. **Supervisors are clinically responsible for psychological services provided by the residents they are supervising.**

Residents will receive a minimum of 4 hours of supervision time per week, at least three which are in individual supervision, across all residency sites.

Evaluation

Each student is evaluated by their primary supervisor for each major and minor rotation. Written evaluations are conducted at the midpoint and end of each rotation. Residents receive a formal, written evaluation of their clinical skills and performance at the midpoint (sixth month) and end (twelfth month) of the residency year. It is expected by the end of the residency that residents are rated on all items within the top three categories. These evaluations are reviewed with the resident and rotation supervisor and are then sent to the Director of Training (DT) to be reviewed. Residents also complete written evaluations for each supervisor in each of their rotations, at the end of their rotations. Residents are encouraged to provide feedback on the quality of supervision, the time commitments involved in the rotation, the balance between direct and indirect hours, and other aspects of the rotation experience. The DT is responsible for communicating with the resident's home academic institution regarding the residents' progress. Written feedback is sent to the home institution at the midpoint and at the time of completion of the residency.

Salary

Residents will receive a salary of \$43,000. Residents will receive three weeks of vacation. In the case of the school rotation placements, the majority of holidays must be taken in December 2024 (2 weeks) and March 2025 (1 week). In the case of community rotation placements, residents can take their vacation as coordinated with their placements. Please note, the Friday seminars are mandatory to attend and absences must be approved by the residency co-directors ahead of time.

Requirements

Eligibility/Minimum application requirements (Academic)

Minimum requirements include:

- Applicants must be enrolled in a CPA or an APA accredited professional psychology doctoral program (Clinical, Counselling or School-Clinical) or its equivalent,
- A minimum of 600 hours of practicum experience, with both assessment and intervention experience required, see APPIC website for specifics.
- Completion of all requirements for the doctoral degree except for the dissertation.

Eligibility/Minimum application requirements (Non-Academic)

Residents in the School-Clinical Track **must** also have the following:

1) A terminal Master's degree

2) A driver's license by the time of interviewing and access to a car during the residency year.

All residents must hold Professional Liability Insurance during the full course of their residency training. Proof of liability insurance coverage will need to be demonstrated prior to beginning the residency. Residents must meet the specific eligibility requirements of their training sites such as Police Checks (VSS), proof of immunizations/updated immunizations.

Application Process

We are CPA- accredited and our residency training program adheres to CPA standards and criteria. We are also members of the Canadian Council for Professional Programs in Psychology (CCPPP) and the Association of Psychology Post-Doctoral and Residency Centers (APPIC). We participate in the APPIC Matching Program, abiding by all APPIC guidelines regarding the residency application and selection process. Canadian immigration policy requires that suitable Canadian Citizen and Permanent Resident applicants must be given preference; international students with valid Canadian Co-op Work Permits will be considered and may apply.

Application Procedure

TARC will only accept applications received through the APPI online.

Please Note:

- 1) We may contact referees or the DCT's directly for further information or clarification.
- 2) We require *no supplemental material* to be sent with the application.
- 3) If you had placements and / or requirements that were negatively impacted by the COVID-19 pandemic, please request that your Director of Clinical Training highlight the nature of this impact in their portion of the APPIC application. If you had placements that were cancelled or prematurely terminated, please describe the training and hours that were anticipated in your cover letter. In the event that your hours fall short of the minimal requirements due to COVID-19, this shortfall will be taken into consideration.

Decisions about ranking of potential residents will be made by the Consortium Committee. Residents will be selected on the basis of merit without regard to race, national or ethnic origin, colour, religion, age, sex, sexual orientation, marital/family status or physical handicap.

Rotation Selection Process for the School-Clinical Positions

Students in the Child Track may apply to the specific clinical rotations they prefer and are encouraged to apply to, and rank, more than one clinical site if desired. Clinical sites are paired with the school board and are determined in the matching process based on applicant ranks and the program rankings.

Students apply to the Clinical Counselling program, not to preferred rotations or positions. Assignment to specific rotations will depend on student preference, experience in intervention, best fit considerations and will take place post-match.

The program numbers to use when applying to the Toronto Consortium's school-clinical and neuropsychology tracks will be forthcoming at a later time. The program numbers for clinical-counselling and health psychology are below:

Adult Track

- **186313** Clinical and Counselling Psychology Residency (2)
- (forthcoming) Clinical Psychology
- (forthcoming) Neuropsychology

Child Track

- (forthcoming) School-Clinical Psychology (2)

The application deadline is consistent with the Phase II deadlines.

****Note: All interviews in 2026 will be completed virtually.**
